Designing My Portfolio

Content goals, design inspiration & the starting direction for my customized digital media art portfolio.

PROMPT 1

Define Your Purpose

My main goal is to build a portfolio for game studios, creative teams & potential clients who need a digital media artist. I want people to immediately see that I can move between 2D art, 3D modeling and animation, motion graphics & graphic design without the work feeling disconnected. My biggest strengths are character-focused visuals, lighting, animation, and taking the energy of a 2D design into 3D. Long term, I want this portfolio to help me reach game design and digital production roles (especially studios like SEGA).

PROMPT 2

Select Your Best Work

- **I Am All of Me** - A Shadow illustration that shows dramatic lighting, composition & motion graphics.
- **Sonic Animation Test** - A Blender project focused on posing, materials, animation & translating a 2D design into 3D.
- **Felicia - Darkstalkers** - Character illustration and graphic design inspired by fighting game posters and art books.
- **Super Sonic Render** - A 3D lighting and material study focused on glow, fur & character presentation.

Portfolio Content

A short personal brand statement and the supplementary material planned for the site.

PROMPT 3

Bio / Artist Statement

Hello, my name is Richard Rojas-Rangel, and I am a Digital Media Art student at SJSU. I mainly work with 3D art, animation, graphic design & interactive media. I like combining technology with art because it lets me experiment with different ideas, characters, and styles while still making everything feel like me. I am building toward work in game design and digital production, especially roles where character art, motion, and visual storytelling can all connect.

PROMPT 4

Supplementary Materials

No resume is included in this starting version. I plan to add a focused resume later that highlights Blender, Substance Painter, After Effects, Illustrator, Clip Studio Paint, animation, modeling & graphic design.

Design Direction

The portfolio references I selected and how those ideas shaped the first version of the page.

PROMPT 5

Two Portfolios That Inspire Me

Raphael Arar: His portfolio inspires me because it uses a clean grid that changes to one column on mobile, but the images still feel interactive through hover effects and links to individual projects.

Don Hanson: His site inspires me because the design feels connected to the 3D and immersive work instead of using a generic layout. I want to combine these ideas: a clear structure that is easy to explore, but with enough movement and personality that it still feels like my art.

PROMPT 6

My Design Ideas

I want the site to feel playful, sharp & professional. My main palette is black and navy with electric blue and cyan, because those colors connect to my online identity and let the colorful character work stand out. The homepage uses oversized type, layered artwork, hover movement, a responsive project grid, and short descriptions. On mobile, the grid becomes one column. I do not want it to feel empty or overly corporate; I want it to feel like a digital artist who works in games, animation & character design made it.

Submission Links

The new portfolio lives in its own folder and builds from the responsive grid and project pages developed in the earlier tutorials.

GITHUB REPOSITORY
https://github.com/S0UNDB1T3/Art-109-Section-81

LIVE PORTFOLIO PAGE
https://s0undb1t3.github.io/Art-109-Section-81/portfolio/

Chosen approach: A customized one-page portfolio with project links, an About section, skills, responsive layouts & a visual style built around my existing online identity.

The live link will display the new page after the portfolio folder and updated index are uploaded to GitHub.
